Linkedin: linkedin.com/in/julian-lora | Portfolio: julianlora.github.io/portfolio/

Passionate programmer with experience in web development, where I have contributed to the creation and maintenance of dynamic and efficient applications. I have demonstrated skills in both backend and frontend development, working closely with clients and design teams to deliver tailored solutions. I am characterized by my proactivity, leadership skills, and commitment to continuous improvement.

WORK EXPERIENCE

FullStack Web Developer

Mar 24 – Present

"OSOLE" – Web and system development.

Responsabilities:

- Backend development using Laravel 11 and frontend with CSS, Bootstrap and Tailwind, creating dynamic web pages with manageable content.
- Implementation of features such as user generation with differential permissions, shopping cart, and sales management.
- Integration of payment methods via Mercado Pago, manipulation and bulk data loading through Excel, and connection to external stock, client, and order management systems using APIs and FTP with automated synchronization.
- Ongoing collaboration with clients and UX/UI designers to ensure a customized design adapted to business logic, utilizing tools such as Figma and ensuring responsiveness.
- Design of relational databases in MySQL and efficient queries using Eloquent and SQL.
- Server deployment, database configuration, email box creation, and domain management through Cloudflare and CPanel.
- Continuous maintenance and support of websites, including framework updates, debugging, and migration of hosting and emails.
- Leadership in supervision and training tasks for other developers, establishing general guidelines and implementing best development practices.
- Promotion of continuous and collaborative learning, demonstrating self-initiative and commitment to professional development through participation in third-party projects.

Achievements:

- Responsible for the development and deployment of 6 websites independently.
- Participation in 15+ websites and systems.
- Deployment of a Laravel project on AWS with continuous integration.
- Production of a best practices guide for internal applications.

Technologies: PHP 8+ | Laravel 9+ | Javascript | JQuery | Vue.js | Ajax | Axios | HTML | CSS | Bootstrap | Tailwind | MySQL | AWS ECR/ECS/Fargate | Docker | Git
